Presentation

DATA SCIENCE SERVICES

Data Science is a technology that adopts scientific processes and algorithms to draw out knowledge and insights from the data.Data science can add value to any business who can use their data well.

Data is the core of your business, and Data Science lets you know how well things are going on and examine what is working effectively for the business and what isn't. In today's era, successful companies are growing more because they utilize their data towards gaining insights to deliver better products and services to their clientele.

Identifying Opportunities	Understand your Audience	Identify Target Audience	Recruiting the Right Talent	Automating Recruitment Processes

TURN YOUR DATA INTO INSIGHT

| Develop a Better Product/Service	Better Informed Decision	Improve Revenue	Reduce Cost	Managing Businesses Efficiently

AI PRODUCT DEVELOPMENT

Artificial Intelligence (AI) helps businesses do more with less by automating extraordinary, but manual and time-consuming tasks. AI is mostly used to extract new insights, transform decision making, and drive improved business outcomes.

Predictions on activity related to machines, customers or business health

Sentiment Analysis

Increase quality of communication with customers

Automation of manual and repetitive tasks

Fraud Detection

Recommendation related to internal issues or customer facing efforts

Monitoring and alerts to provide assessments on the state of your business

Social Network Analysis

Chatbot Solutions

BUSINESS INTELLIGENCE SERVICES

Business Intelligence serves for a business is helping the corporate executives, business managers, and other operational heads take better data-driven business decisions.

BI extract important insights from vast unstructured data & transform them into valuable business information. In today's customer-centric, digital-first world, many business owners and managers are bombarded with information overload and are urgently seeking ways to derive greater control, understanding, and intelligence from their organisation's data.

Accelerating decision-making process

Make strategic decisions

Faster reporting

Identifying the market trends

Gaining competitive advantages

Driving new revenues

Increasing operational efficiency

Spotting addressable business problems

Turning Data into Actionable Information

VIDEO ANALYTICS

Video Analytics uses mathematical algorithms to monitor, analyze and manage large volumes of video. It digitally analyzes video inputs; transforming them into intelligent data which help in taking decisions.

Video Analytics can be real-time – configured to track and provide alerts to specific incidents as they happen – or post event – retrospectively searching for incidents that have already occurred.

How Video Analytics can help you

- Pattern Recognition
- Security Access Point Monitoring
- Motion detection
- Emotion Recognition
- People counting
- Facial recognition
- Abandoned Object Detection

CORPORATE TRAINING

Data is at the core of every business. Companies of all shapes and sizes can benefit immensely from engaging in the practice of data analytics and data visualization. We at Fingertips provide expert Data Management, Data Science & Business Intelligence training to your team to build and strengthen your business.

Fingertips data science and Business Intelligence training empowers your workforce to efficiently tackle data-related projects in-house. We provide training to fill in the gaps, enabling your organization to capitalize on the potential already working under your roof.

- Improve efficiencies in processes
- Improve Customer Satisfaction
- Improved retention rates
- Drining Revenue
- Increased innovation in strategies & products
- Increase in Employee Productivity
- Increased capacity to adopt new technologies and methods
- Increased employee motivation

INDUSTRY ORIENTED TRAINING

Leveraging the use of big data, as an insight-generating engine has driven the demand for data scientists at enterprise-level, across all industry verticals.

In Data Science & Artificial Intelligence training, candidates will acquire hands on practice Data Science, AI and BI tools which enables them easily transition to Data Science.

Training Highlights

25+ Hands on Practice

250+ Hours of Classroom Training

5+ Industry Case Study

300+ Companies Research Designed Curriculum

10 + AI Experts Trainer
